KIT SELECTION

Although each Fuel Consumption Kit consists of the same items, the size of the meter and the process connections change depending on the rate of flow, which is a direct correlation to the size of the engine.

A typical diesel fuel loop system would on average have 3.5 times more fuel in its line than what the engine consumes at full load. With this in mind, selecting the right kit based on the engine's power output is important to ensure accuracy and the positive displacement meters' longevity.

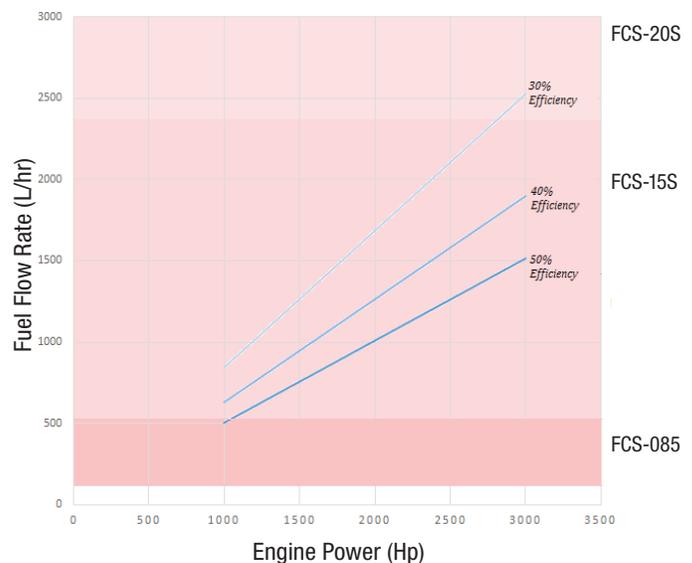

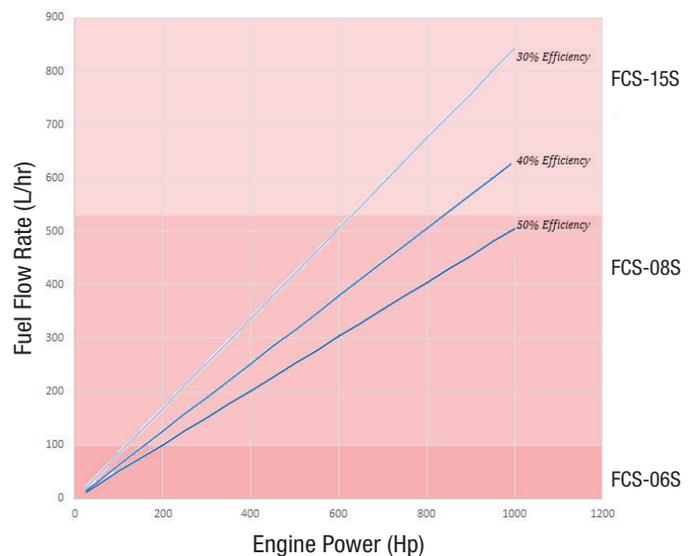

The graphs depicted here should be used as a guide when determining the size of kit is required.

KIT INCLUDES:

- 2 x EGM-Series Electronic Flowmeter
- 1 x F127 Totalizer
- 2 x Meter Brackets
- 2 x Fuel Strainer plus Connector
- Cable Glands

FUEL CONSUMPTION SYSTEM - Marine

FLOMECC[®] Fuel Consumption System (FCS) is a complete fuel monitoring system that comprises 2x EGM positive displacement meters coupled with an F127 flow instrument for accurate measurement of fuel consumption rates and total fuel consumption. The FCS can accurately measure fuel consumption on combustion engines by correcting for temperature differences from the inlet to outlet of the engine. Pulsating flow electronics, eliminating error due to fuel injection pulsation, coupled with integral PT100 resistance thermometers in Flomec's renowned positive displacement meters gives an accurate and economic fuel consumption measurement solution for all engine sizes.

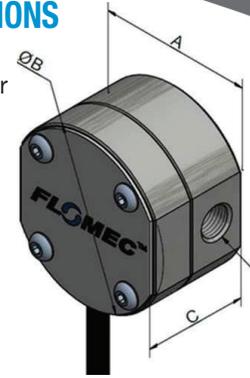

The Fuel Consumption System is designed for Diesel Fuel. Diesel fuel is not considered a flammable fluid in most of the world, but it is in the USA. **The Fuel Consumption System does not have FM Approval and should not be sold for use in the USA.**
